

## ETGG1801 — Game Programming Foundations 1

### Lab 1 — Printing

10 points

Due on 9/2/2015 by the end of class

#### Overview

The purpose of this lab is to introduce you to printing to the console using python. **ALL** tasks listed below must be completed to receive credit on this assignment.

#### Tasks

1. Create a python script file named **lab01.py**
2. Place a header at the top of your script containing the filename, your name and the date. For example, my script would have the following at the top (be sure to include the '#' symbol, as this tells python that these lines are comments, not code):

```
# lab01.py  
# Andrew Holbrook  
# 8/26/2015
```

3. Using python's print function, print the following to the console:
  - Your full name
  - Your favorite game
  - Why you want to study game programming

See **lab01.py** on the class site for an example.
